## Undergraduate study discipline

# Graduate Profile

## Current role

Project Coordinator  
Mission Analytics Group, Inc

Megan Strain  
Class of 2018

## Why did you chose AMBS?

"I wanted to go abroad for my master's to experience an international perspective on how companies can best equip and support their employees to work and feel better. I had studied abroad at University of Manchester for a semester in my undergraduate studies, and I enjoyed the city and the UK as a whole. Alliance MBS also is a respected and established business school in the UK."

"My course gave me perspective into how to better run a business and to support your workers."

## How did your time at AMBS help you in your current role?

"Since graduation, I was hired to work with a small government contractor in San Francisco as their project and proposal coordinator. Since the company is small, this role encompasses human resources roles, operations roles, and quality assurance.

"My master's has helped me appreciate and know how to work with the people to make their work better and healthier. It also greatly improved my analytical skills, using SPSS and M-Plus, and writing about scientific studies."
